BIZDOM

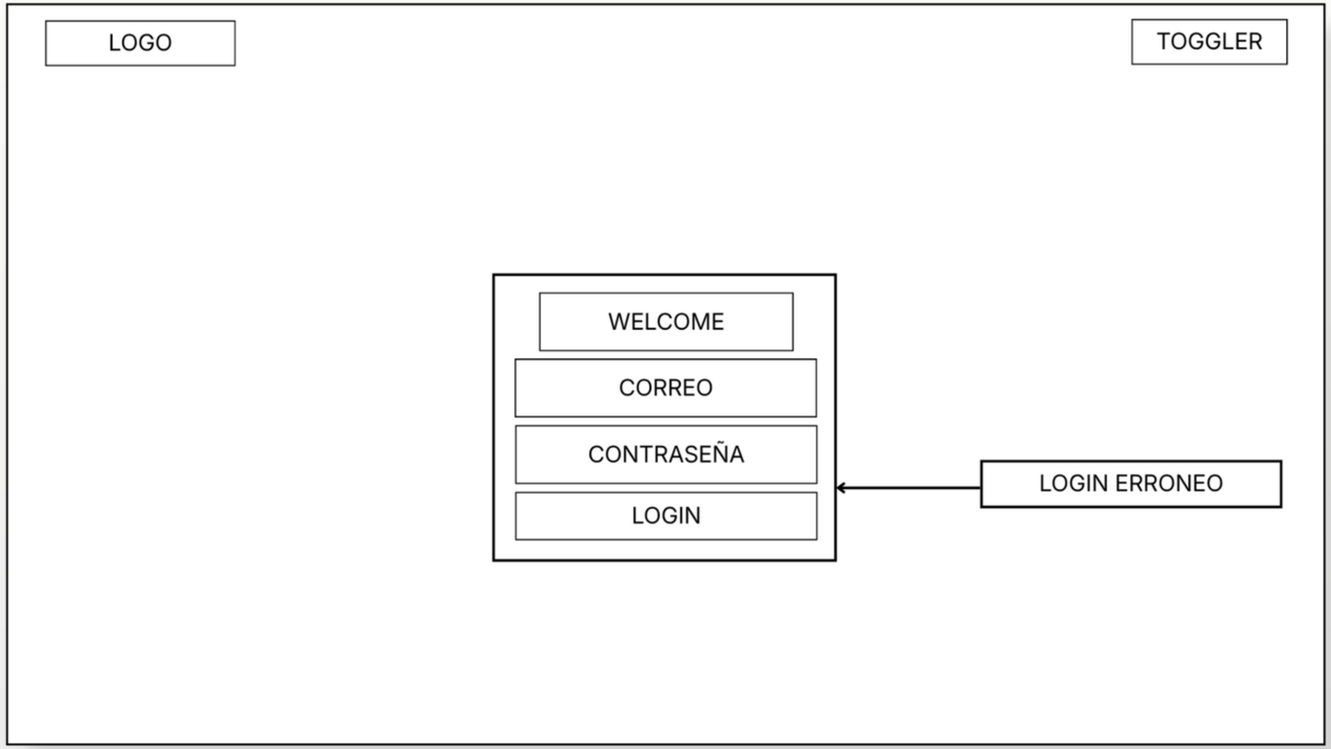
Home / Login

The home screen should immediately communicate what the product is and what the user can do next. The primary goal is a low friction sign in flow with clear guidance and minimal cognitive load.



Primary layout

- Centered login card with generous spacing and strong visual hierarchy.
- Brand or product name at the top with a short one line value statement.

Content hierarchy

- Title such as Sign in
- One sentence helper text explaining access to the inbox
- Email and password fields with clear labels and examples
- A single dominant primary button

Form behavior

- Real time validation and friendly error messages close to the field.
- Loading state on submit with disabled button to prevent double submits.
- Password visibility toggle to reduce input errors.

States

- Default
- Loading
- Invalid credentials
- Session expired
- Network error

Success criteria

- User understands the next step in under 3 seconds.
- Sign in can be completed in under 10 seconds.
- Errors are actionable and shown next to the relevant field.

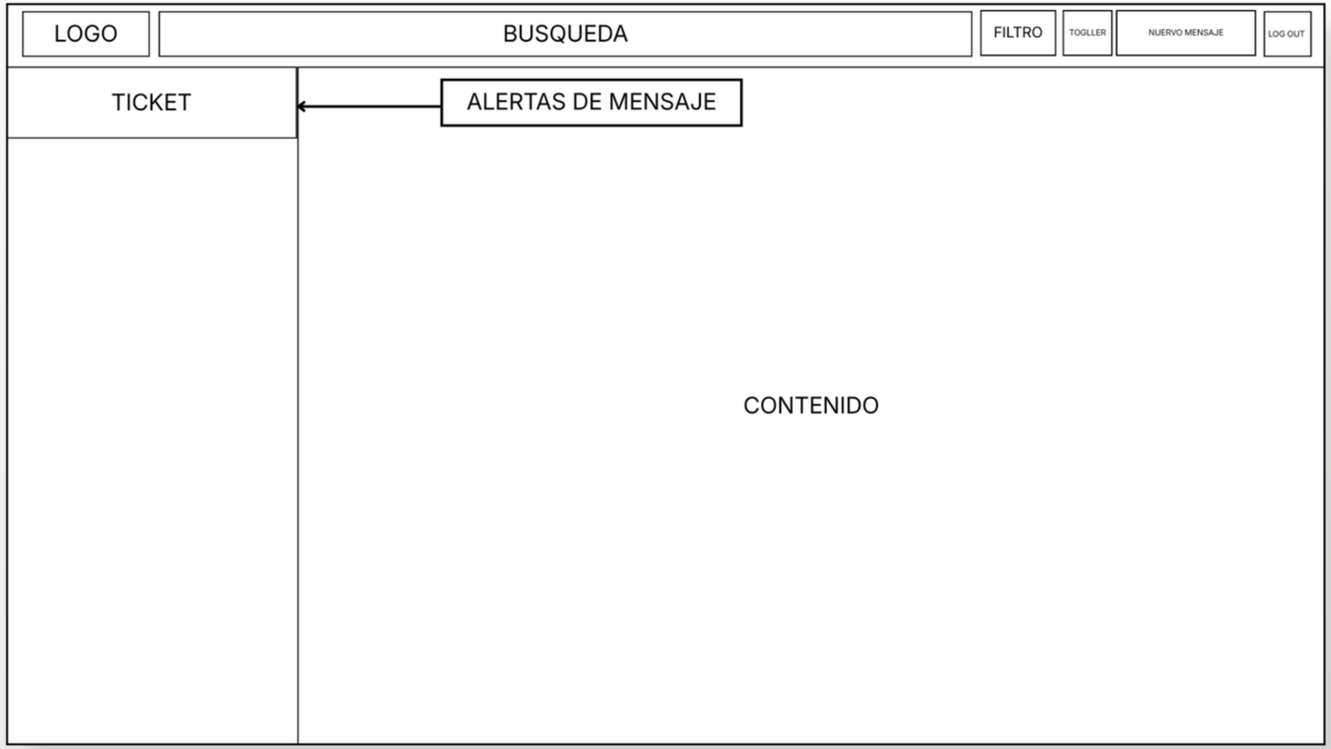
Inbox home

After a successful sign in, the user lands on the inbox overview. The goal is to make the product feel easy to use and intuitive for everyone by showing the most important actions first and reducing decision fatigue.

Primary layout
Top bar with logo and account actions.
Search input as the main control to find conversations quickly.
Inbox panel showing the conversation list.
Empty content area on the right before a conversation is selected.

Content hierarchy
Page title such as Inbox.
Search with a clear placeholder such as Search by subject or participant.
Unread filter toggle and unread counter badge.
Conversation items ordered by most recent activity with a clear unread indicator.
Each item shows subject, last message preview, and timestamp.

Interaction behavior
Search updates results quickly and keeps the scroll position stable.
Unread filter is sticky and easy to reset.
Selecting a conversation highlights it and loads the thread on the right.
The user can start a new conversation from a visible primary action.



- **States**
- Default list populated
- Loading list
- Empty list
- No results for search
- Unread filter returns zero items
- Session expired redirects to login

Success criteria
- User can identify unread conversations in under 2 seconds.
- User can find a conversation in under 15 seconds using search.
- The next action is always obvious without reading documentation.

BIZDOM

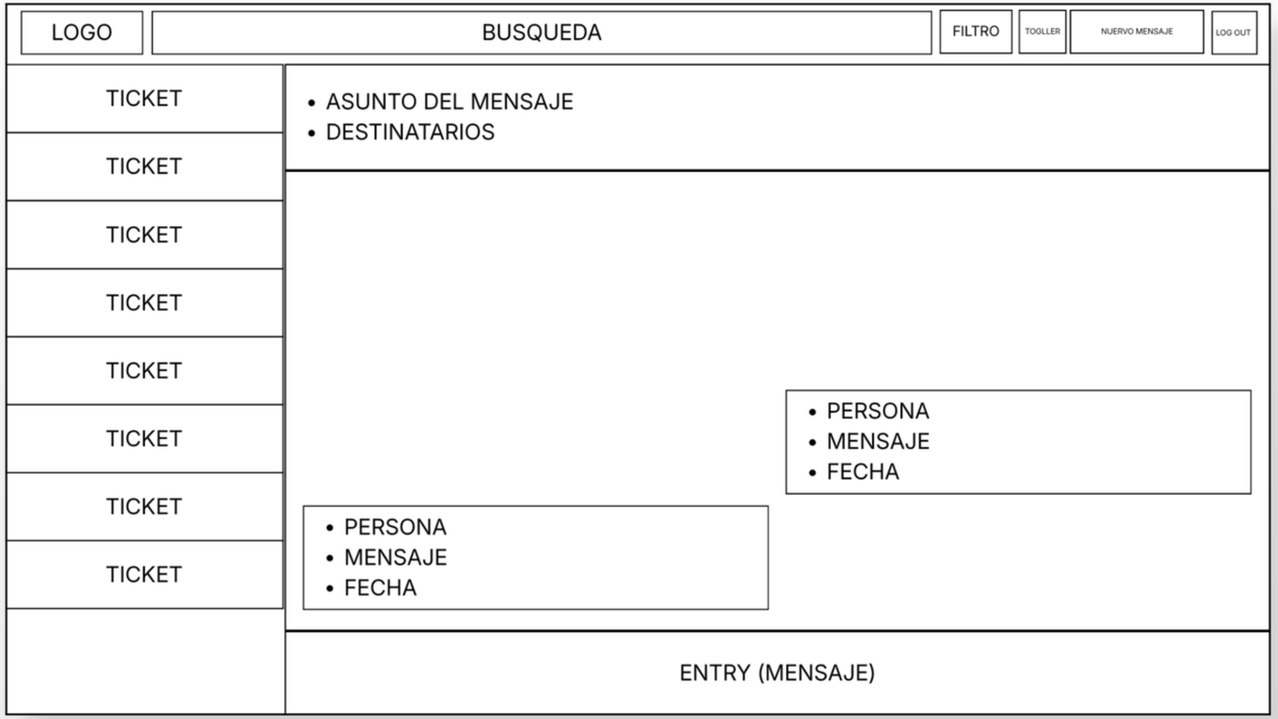
Open conversation

When the user selects a conversation, the inbox becomes a split view experience. The goal is to keep navigation simple and intuitive for everyone while making the thread easy to read and quick to reply to.

Primary layout
- Left panel keeps the conversation list visible for fast switching.
- Right panel shows the selected conversation details and message thread.
- Header area shows subject and recipients with clear hierarchy.
- Reply composer is anchored at the bottom.

Content hierarchy
- Conversation header with subject as the primary title.
- Recipients shown below the subject in a smaller secondary style.
- Message thread displayed in chronological order with clear sender name and timestamp.
- Unread messages are visually distinct until the thread is viewed.
- Reply input with placeholder such as Write a message and a primary Send button.

Interaction behavior
- Selecting another conversation updates the right panel without losing the left list state.
- New replies appear instantly at the bottom of the thread after sending.
- Scroll behavior keeps the latest messages in view while allowing history review.
- Keyboard friendly actions such as Enter to send and Shift Enter for new line.



States
- Loading conversation details
- Thread loaded
- Sending message
- Send failed with retry option
- Conversation has no messages yet
- Session expired redirects to login

Success criteria
- User can understand who the message is for and what the topic is in under 2 seconds.
- User can send a reply in under 10 seconds without searching for controls.
- Switching conversations feels fast and does not cause loss of context.

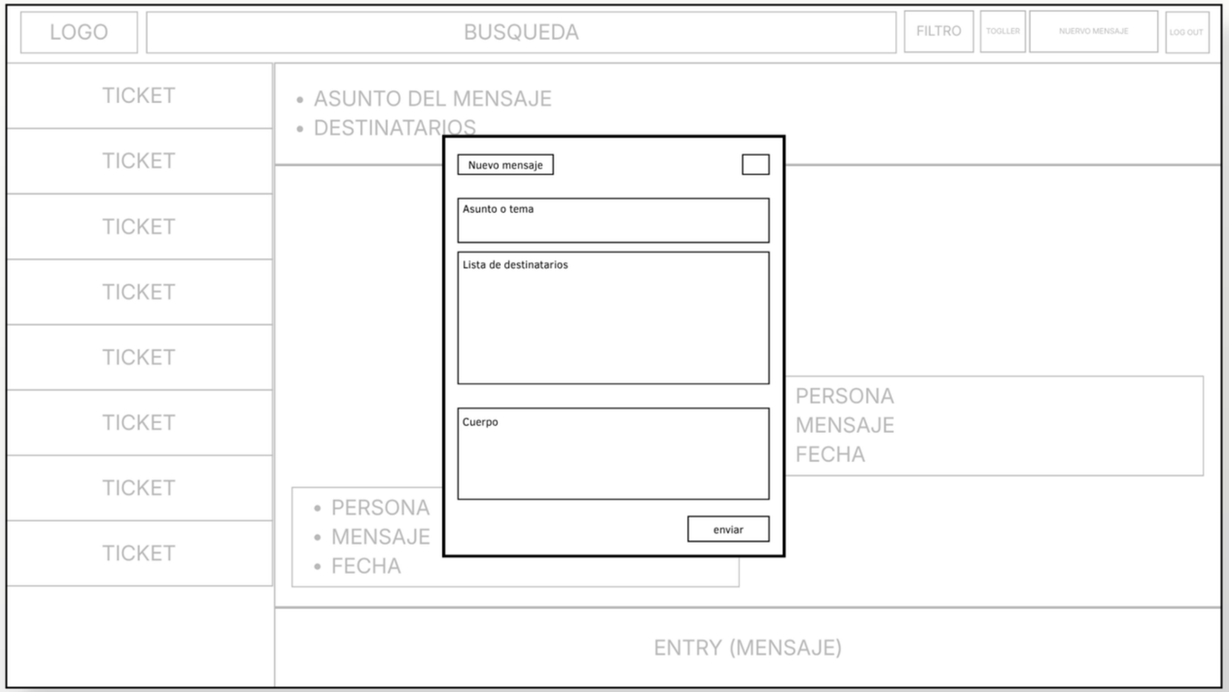
BIZDOM

New conversation

This modal supports creating a new conversation in a simple and intuitive way for everyone. The goal is to reduce friction by keeping the form short, guiding the user step by step, and clearly showing who will receive the message.



Primary layout

- Modal header with a clear title and a close action.
- Short form with three sections in order: subject, recipients, and message.
- Primary action button to send and a secondary action to cancel.

Content hierarchy

- Subject field first to establish context.
- Recipients selector with clear name and ID for confidence and accuracy.
- Selected recipients count to confirm who will be included.
- Message field last with a clear placeholder and enough space to write.

Interaction behavior

- Recipients can be selected and deselected without losing state.
- Form validation prevents sending without a subject, at least one recipient, and a message.
- Submitting shows a loading state and disables actions to prevent duplicates.
- After sending, the modal closes and the new thread appears in the inbox.

States

- Default
- Validation errors
- Sending
- Send failed with retry
- Success

Success criteria

- User can create a new conversation in under 30 seconds.
- User clearly understands who the message will be sent to before submitting.
- The modal is easy to dismiss without losing work by accident.
